

**Dear Valued Partner,**

As industry regulations evolve, we're committed to keeping you ahead of the curve with safe, compliant, and high-performing adhesive solutions. We're writing to inform you of an upcoming change to our **DP 2590 Canister Adhesive** that supports both regulatory compliance and product safety without impacting performance.

Beginning in **mid-July 2025**, **DP 2590 will transition to a MEC-free formula**, in response to the **EPA's ban on Methyl Ethyl Ketone (MEC)**. We have approved a compliant **alternative non-flammable additive** in collaboration with our packaging partner, that maintains the product's **non-flammable classification** and proven performance.

**What You Need to Know:**

- **EPA Effective Date:** July 31, 2025 (orders will be updated as a running change—no disruption expected)
- **Product Performance:** No change to product performance, application, or handling
- **Label Update:** Canisters will be clearly marked as **"MEC-Free"**
- **Tech Data Sheet:** Updated to reflect the new formula designation
- **Current Inventory:** Existing **DP 2590 inventory is safe and acceptable for use and may continue to be used during the transition**

There is no action required on your end at this time. The transition will be seamless, and we remain committed to delivering the quality and safety you expect from our products.

If you have any questions or require additional documentation, please don't hesitate to reach out to your sales representative or contact us directly at 800.641.0808.

Thank you for your continued trust and partnership.

Sincerely,  
**Design Polymeric**
