Product Description: EPO-TEK® H20E-HC is a two component, 100% solids silver-filled epoxy system designed specifically for chip bonding in microelectronic and optoelectronic applications. It is also used extensively for thermal management applications due to its high thermal conductivity. It has proven itself to be extremely reliable over many years of service and is still the conductive adhesive of choice for new applications. Also available in a single component frozen syringe. This is an increased thermal conductivity version of EPO-TEK® H20E.

Typical Properties: Cure condition: 150°C / 1 Hour Different batches, conditions & applications yield differing results.
